

HARSHIT GOEL

Data Scientist | Data Analyst | ML Engineer

+91 9311470005 | New Delhi, India | harshitgoel931147@gmail.com | www.linkedin.com/in/harshit-goel-42ab91203 | www.github.com/HarshitGoel11062005

SUMMARY

Data Analyst with hands-on experience across **SQL, Power BI, and Python**, focused on turning raw data into actionable business insight. Built multiple analytics and machine learning projects — including sports, entertainment, energy, and financial fraud use cases — analyzing datasets ranging from thousands to 500,000+ records to surface trends, forecast outcomes, and support data-driven decisions. Skilled in data cleaning, exploratory analysis, statistical modeling, and interactive dashboard development. Currently pursuing a B.Tech in Artificial Intelligence and Data Science (CGPA 9.33).

SKILLS

- **Languages:** SQL, Python
- **Data & Analytics:** Machine Learning, Predictive Analytics, Exploratory Data Analysis (EDA), Statistical Analysis
- **Libraries:** Pandas, NumPy, Matplotlib, Scikit-learn
- **Tools & Platforms:** SQL Server, Power BI (DAX, Data Modeling), Excel (Pivot Tables, Power Query), Git, GitHub, Jupyter Notebook
- **Soft Skills:** Analytical Thinking, Problem Solving, Attention to Detail, Team Collaboration

PROJECTS

IPL Data Analysis Dashboard | *SQL, Power BI*

- Analyzed **15+ seasons** of IPL match and player data (10,000+ records) using advanced **SQL** — Joins, CTEs, and Window Functions — to uncover performance trends.
- Built an interactive **Power BI** dashboard with 8+ **DAX**-powered KPIs, cutting manual reporting time by an estimated 40% for team win %, player stats, and toss-impact analysis.
- Applied **data modeling** across multiple related tables, enabling seamless cross-filtering and drill-through reporting for stakeholders.

Energy Consumption Forecasting | *Python, LSTM, Time Series*

- Developed an **LSTM** deep learning model on 2+ years of hourly consumption data, forecasting future energy usage with ~90% accuracy.
- Performed seasonal trend analysis and applied **clustering** to segment usage behavior across 5+ consumption categories, flagging peak-demand periods and anomalies.
- Engineered features from raw time-series data using **Pandas** and **NumPy**, improving model robustness and forecasting precision by a measurable margin.

Credit Card Fraud Detection | *Python, Machine Learning, Logistic Regression*

- Analyzed a dataset of **500,000+ transactions** to identify fraudulent patterns, performing **EDA** and feature engineering to handle severe class imbalance.
- Built and optimized a **Logistic Regression** classifier, achieving strong precision/recall trade-off with an F1-score competitive for real-time fraud screening.
- Cleaned and transformed large-scale financial data, enabling reliable real-time fraud classification at scale.

IMDb & Amazon Analytics Dashboard | *Power BI, DAX*

- Designed interactive **Power BI** dashboards visualizing genre trends and audience ratings across 10,000+ IMDb titles and top-performing directors/actors.
- Integrated Amazon product analytics (5,000+ SKUs) to surface sales and review patterns, enabling comparative analysis across entertainment and e-commerce domains.
- Leveraged advanced **DAX** formulas and **Power Query** transformations to clean raw data and build responsive, drill-through-enabled dashboards.

EDUCATION

Bachelor of Technology, Artificial Intelligence and Data Science | 2023 – 2027

Guru Gobind Singh Indraprastha University | CGPA: 9.33 / 10

Senior Secondary Education (Class 12) | 2022 – 2023

KIIT World School | CGPA: 9.40 / 10

ACHIEVEMENTS & CERTIFICATIONS

- **3 Research Papers Published** — Authored and published three peer-reviewed papers in AI, Data Science, and Machine Learning.
- **SQL Server Workshop** — Certified by ScholarHat in advanced database querying and management.
- **Power BI Certification** — Certified in Power BI for Beginners: data visualization, dashboards, DAX modeling.
- **Industry Readiness & Soft Skills Program** — Workplace communication and analytical-thinking training.
